FRONT-END ENGINEERING ASSIGNMENT

Here we need to design a calculator App by using HTML, CSS, JAVASCRIPT where all these files need to be separated and linked in the HTML file. So, we will be having 3 files which are:

1. Calculator.html
2. Calculator.css
3. Calculator.js

In HTML file we are going to design the lookup of the calculator by using tags of the html and some properties of it. And we link our CSS & JS files here only.

In CSS file we design the page like how the page should look like and we use some properties like border, height, width, color, font-size, padding etc.., and we link this style sheet in our HTML file.

In JavaScript (JS) file we will write the code to operate the page by using events and buttons and their functions and the calculations functions like how to perform all the functions and writing all these finally, we link this JS file in HTML file.
